 - 125VAC
 - 60Hz
 - 1875 Watts

There always seems to be so many bulky transformers but so little space between outlets. We end up with wasted space, and possibly the need of more power strips or "power strip saver" jumper cords. The Rotating Power Strip takes care of this problem. Simply rotate the outlets in opposite directions and utilize all of the power outlets. It's a unique solution to a very common problem.
